PROFESSIONAL SUMMARY

- Data Scientist and AI/ML Engineer with **7+ years** of experience building analytics solutions, machine learning systems, and AI-powered workflows that support data-driven decision making across large-scale datasets.
- Experienced in SQL, statistical analysis, experimentation, predictive modeling, data engineering, and Generative AI development using Python, R, TensorFlow, Scikit-Learn, and cloud-native technologies.
- Strong expertise in Retrieval-Augmented Generation (RAG), AI agents, information retrieval, analytics automation, data quality monitoring, and transforming complex business questions into scalable data products.
- Hands-on experience developing data pipelines, machine learning systems, semantic retrieval platforms, and AI-powered applications that improve operational efficiency and stakeholder decision making.
- Skilled at collaborating with product, engineering, and business teams to define metrics, analyze experiments, automate workflows, and deliver actionable insights.
- Master of Science in **Statistics (Data Science)** candidate at California State University, East Bay with a **4.0 GPA**, combining advanced statistical expertise with practical experience in analytics, machine learning, and artificial intelligence.

EDUCATION

California State University, East Bay

Master of Science in Statistics (Data Science) (GPA - 4.0)

Aug. 2024 – May 2026

Hayward, CA

EXPERIENCE

AI/ML Engineer

Techchefz

Apr. 2022 – Aug. 2024

- Designed and maintained analytics and machine learning pipelines supporting business intelligence, predictive modeling, and operational decision-making across multi-source datasets.
- Built scalable ETL, feature-engineering, and data-processing workflows using Python and SQL to transform structured and unstructured data into production-ready analytical datasets.
- Performed exploratory data analysis, statistical analysis, feature evaluation, and machine learning model validation through experimentation and performance assessment.
- Developed NLP-based information extraction systems using spaCy and Named Entity Recognition (NER) techniques to generate structured features from unstructured content sources.
- Developed and deployed Generative AI applications leveraging Large Language Models (LLMs), LangChain, and Retrieval-Augmented Generation (RAG) architectures for intelligent automation and question-answering workflows.
- Implemented data quality, monitoring, and evaluation frameworks to improve dataset reliability, model performance, and operational visibility.
- Collaborated with engineering, analytics, and business stakeholders to define metrics, evaluate outcomes, and communicate analytical findings.
- Reduced model training time by 40% and memory utilization by 30% through optimization of feature pipelines, training workflows, and infrastructure components.

Business Analyst

Swastik Wood Products

Sep. 2017 – Mar. 2022

- Developed data visualization dashboards to monitor sales, operational expenses, and productivity metrics, enabling data-driven decision-making across business operations.
- Developed statistical forecasting models and regression analyses to identify key business drivers, predict future sales performance, and support strategic planning initiatives.

- Built recurring business performance dashboards and KPI reporting frameworks to monitor sales performance, operational efficiency, and revenue growth trends.
- Conducted in-depth analysis of business expenses, identifying opportunities to reduce operational costs by leveraging data-driven insights. Developed and implemented cost-saving strategies that led to a measurable reduction in unnecessary expenditures.

PROJECTS

EmailSignal – AI-Powered Data & Decision Intelligence Platform <i>GitHub</i>	<i>OpenAI Agents SDK, CopilotKit, Redis, W&B Weave, TypeScript, React, Node.js</i>	Jun. 2026
• Built a multi-agent AI platform that transforms large volumes of email activity into actionable decisions by analyzing communication patterns, prioritizing tasks, and synthesizing insights. • Designed agent orchestration workflows using the OpenAI Agents SDK, enabling autonomous classification, hypothesis generation, decision synthesis, retrieval, and conversational assistance. • Implemented Redis-backed memory, vector search, semantic retrieval, and evaluation pipelines using W&B Weave to improve relevance, reliability, and analytical performance. • Recognized as the Best Team Using CopilotKit at WeaveHacks 4 for innovative use of AI agents, workflow automation, and intelligent decision support.		
Human Resources Chatbot	<i>FastAPI, Python, LangChain, Docker, Bitbucket</i>	Jan. 2024 – May 2024
• Designed and implemented a Generative AI-powered HR assistant using Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) to provide context-aware responses from proprietary organizational knowledge sources. • Built LangChain-based agent workflows integrating contextual retrieval, tool execution, memory management, and dynamic prompt orchestration. • Developed automated ETL and retrieval pipelines supporting real-time context injection and intelligent response generation. • Established evaluation procedures to assess retrieval quality, response accuracy, hallucination rates, and workflow reliability across representative user scenarios.		
Solvit – Intelligent AI Whiteboard <i>Devpost</i>	<i>FastAPI, React, TypeScript, Groq API, SymPy</i>	Mar. 2026
• Winner – Best UI/UX, HackHayward Hackathon. • Built a real-time AI-powered whiteboard that interprets hand-drawn mathematical expressions and generates step-by-step solutions. • Engineered a FastAPI backend integrating Groq AI and SymPy to perform context-aware equation recognition and symbolic computation.		

TECHNICAL SKILLS

Languages: Python, SQL, R, PostgreSQL
Developer Tools: AWS (EC2, Lambda, S3, CloudWatch), Microsoft Azure, Airflow, Docker, Git, Linux, FastAPI
Libraries & Frameworks: Pandas, NumPy, TensorFlow, Scikit-Learn, spaCy, LangChain
Data Science & Statistics: Statistical Inference, Hypothesis Testing, Experimental Design, A/B Testing, Exploratory Data Analysis (EDA), Forecasting, Predictive Analytics, Regression Analysis
Machine Learning: Regression Models, Classification Models, Random Forest, Gradient Boosting, Support Vector Machines (SVM), Predictive Modeling, Feature Engineering, Model Evaluation, Hyperparameter Tuning
Data Engineering: ETL Pipelines, Data Processing, Data Validation, Data Quality Monitoring, Data Automation
Generative AI: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, Information Retrieval, Semantic Retrieval, Prompt Engineering, Question Answering Systems

CERTIFICATIONS

- Google Data Analytics Professional Certificate
- IBM Data Science Professional Certificate
